BEE FRIENDLY

Denver Golf's environmentally friendly initiatives

This month our Bee Friendly program highlights Denver Golf's Water Conservation Program!

Denver Golf values stewardship in the community surrounding our golf courses. Through our commitment to stewardship, we responsibly and efficiently use our resources to stay in line with water conservation standards.

- Denver Courses do not water on a set schedule. We use Evapotranspiration (ET) to determine how much water the plant used and how much evaporated.
• Every golf course (Harvard this fall) has their own weather station.
• Denver Golf courses conserve water by making the plant and soil as healthy as possible.
• Topdressing, aeration, needle tines, and wetting agents are all major factors on how we get firm fast playing conditions while providing high quality turf.
• Denver Golf courses collectively conserve enough water annually to supply an entire 18-hole facility - that's about 65 million gallons of water saved!
• Turfgrass is an excellent water filtration system. Many of our courses use reclaimed or ditch water. This water is filtered as it passes through the turf and soil as well as evaporating through the grass blades.

The First Tee Of Denver Denver's Junior Golf Program

Free Korn Ferry Tour Junior Clinic

Join us at the TPC Colorado Championship at Heron Lakes for the Junior Clinic presented by Davidson-Gebhardt Chevrolet on Monday, July 8th

COURSE UPDATES

City Park Redesign Updates

During major storms, the redesigned City Park Golf Course will temporarily hold a and slow floodwaters while protecting the course from damage.

Integrating stormwater detention in golf courses is a very common practice. Outside of major storms, the area will remain a dry, fully-functioning golf course.

After considering technical merits and community input, City Park Golf Course was selected for water detention because it will protect significantly more homes and businesses; enhances an existing city asset; reduces the need for private property acquisition; and provides for future stormwater needs.

City Park Golf Course will reopen once the turf is established. Weather plays a significant role in turf establishment and maturation.

While the range may be full of water and appear to be operational as an aqua range, our goal is to minimize/remove any and all stormwater in the pond.

Since we no longer use the range for irrigation water the stormwater is considered a nuisance. In order for us to do any work in the reservoir we need to have almost all of the stormwater out of the reservoir.

The dam entirely and convert the range to a dry range that incorporates a stormwater component in some fashion. This will also allow us to make some improvements to the range and reorient the tee line to better accommodate and north/south hitting direction and away from 10 fairway.

The dam long term goal is to decommission the dam entirely and convert the range to a dry range that incorporates a stormwater component in some fashion.
